

Soprema AVCL / Breather Membrane Rolls General Information

Products

Sheeting for buildings in roll format which can be unrolled, adhered / self-adhered, or fixed. For product-specific technical information, please read the relevant Technical Datasheet/Declaration of Performance /Environmental Product Declaration.

Storage & Handling

Soprema AVCL / breather membrane rolls should be stored upright, standing on end within the original packing materials. Rolls should be kept away from UV rays/heat/sparks/open flames/hot surfaces & moisture. When stored correctly, the products have an unlimited shelf life. Rolls of products weighing more than 25kg should be handled either with mechanical handling equipment or with manual gripping tools with a load of no more than 25kg per person. A specific pictogram is fixed to rolls weighing less than 25kg. Use suitable safe manual handling techniques.

Installation

Installation of Soprema AVCL / breather membrane rolls is to be carried out by competent installers only. Installers are to strictly follow installation instructions contained within the project specification using installation tools suitable for the project.

Installers should ensure all relevant legal and HSE requirements are complied with including but not limited to, the wearing of appropriate PPE, safe access, site securement, and work permits for hot works.

Inspection and Maintenance

Membranes should be inspected and maintained in line with BS 5534 or the relevant standard relating to the installation.

Disposal

Nature of the waste products: non-hazardous waste, non-inert waste.

Waste treatment methods: At the end of a product's life, products can be disposed of with household waste and may be discharged to landfill or incinerated, subject to local regulations.

Contaminated packaging waste: the substance or mixture of waste itself and any contaminated packaging waste must be disposed of in conformance with the current local regulations at the time of disposal. Recycling and reuse of adhered membranes is not possible.

Ecological information

No toxicological adverse effects on the environment are known or will ensue when used normally.
